hepatic biliary pancreatic cancers mainly including hepatocellular carcinoma cholangiocarcinoma gallbladder cancer are highly aggressive malignancies with few treatment options and poor prognoses effects of the traditional systemic treatments such as chemotherapy and radiotherapy are quite limited to hepatic biliary pancreatic cancers for the patients who suffer from hepatic biliary pancreatic cancer and lose the opportunity of radical surgery few targeted drugs are available even for the drugs in clinical trial potential drug targets and prognostic biomarkers for hepatic biliary pancreatic cancer are less studied compared to other common cancers such as lung cancer prognostic biomarker study is the initiation to explore new drug targets and revelation of the underlying mechanisms of tumor progression

the fundamental question of how an undifferentiated progenitor cell adopts a more specialized cell fate that then contributes to the development of specialized tissues organs organ systems and ultimately a unique individual of a given species has intrigued cell and developmental biologists for many years advances in molecular and cell biology have enabled investigators to identify genetic and epigenetic factors that contribute to these processes with increasing detail and also to define the various molecular characteristics of each cell fate with greater precision understanding these processes have also provided greater insights into disorders in which the normal mechanisms of cell fate determination are altered such as in cancer and inherited malformations with these advances have come techniques that facilitate the manipulation of cell fate which have the potential to revolutionize the field of medicine by facilitating the repair and or regeneration of diseased organs given the rapid advances that are occurring in the field the articles in this ebook are both relevant and timely these articles originally appeared online as part of the research topic cell fate overseen by my colleagues dr lin dr buttitta dr maves dr dilworth dr paladini and myself and have been viewed extensively because of their popularity they are now made available as an ebook in a more easily downloadable form michael t chin

in recent years the complex ecosystem surrounding cancer cells known as the tumor microenvironment tme has become a focal point of extensive scientific inquiry the tme is composed of various cellular components like fibroblasts and immune cells as well as non cellular elements such as the extracellular matrix and biochemical gradients research has increasingly centered on the dynamic interplay between epigenetic regulation and metabolic processes within the tme such interactions are pivotal in modulating gene expression thereby influencing cancer cells invasiveness and resistance to therapies however despite progress the intricate relationship between metabolic changes and epigenetic modulation in cancer remains insufficiently elucidated revealing a significant gap in our comprehensive understanding this research topic aims to advance the understanding of epigenetic influences and metabolic reprogramming within the tme it seeks to stimulate both foundational and applied research that can lead to the development of novel targeted anti cancer therapies by leveraging insights into metabolism and epigenetic regulation the ultimate goal is to enhance the effectiveness of cancer therapies and minimize their adverse effects through innovative approaches that exploit

these complex biological networks to enhance research coverage on this subject we invite contributions that address a variety of themes within the context of the time o regulation of epigenetic processes within the time including the roles of non coding rnas and protein post translational modifications o exploration of epigenetic markers in the time with diagnostic prognostic or therapeutic potential o metabolic processes in cancer cells and their surrounding supportive tissues o immunometabolism s role within the time o adaptation strategies of metabolism in the time o impacts of metabolic alterations on immune surveillance immunotherapy and cancer evasion o tumor associated immune checkpoints mediated by metabolic regulation o development of novel therapies targeting metabolic and epigenomic pathways o investigation of new materials influencing tumor cell biology note that manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this research topic
